                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ဂ္ဂ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              US-08-836-455-1.rng

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Page 25

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          pri catalytic antibody for enantioselective hydrolysis of mano acid pri esters - also new hybridoma secreting the antibody pp biaslosure; Page 37-39; 43pp; Japanes.

Cor The patent discloses new catalytic antibodies which hydrolyse mano catalytic antibodies which hydrolyse mano catalytic antibodies which hydrolyse mano catalytic antibodies are mano-protected.

Also disclosed are new hybridomas expressing the catalytic antibodies, catalytic antibodies are raised in sice using the compound p-nitrobenyal (catalytic plantic) the produced are mano-protected.

Cor antibodies are raised in sice using the compound p-nitrobenyal (catalytic plantic) subjiliposphomate as hapten. They are used for efficient resolution of racesic maino acids useful cor the production of optically settive drugs and chiral separation sents.

Cor the production of optically active drugs and chiral separation of sents.

Cor the production of optically active drugs and chiral separation of the production of the bybridoma skalod. The Light chain of antibody 30, produced by sequence 652 BP. 194 A; 151 C; 154 G; 153 T.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

OPEN OF A COMMAN TANDER.

OPEN OF A COMMAN TANDER AND A COMMAN SEQUENCE.

Primer, amplification: FCR; mouse: Kappa chain; heavy chain; artiface marker; octal; surface marker; foetal; sequential; wastatic; therapy; Alabelmer's élassas; hybridoma; tential hyperchoseteroleenis; binding affinity; ds.

extra:capsular cataract extraction.

Disclosure T9, 1; 68p; Esglish.

An immunotoxin (given in R70977) comprises the heavy (WH) and light claim (VL) washabe regions of anti-tens epithelium I933 Mab 4197% linked to ricinable regions of anti-tens epithelium I933 Mab 4197% (085887-88, respectively) were obtained from hybridoma mRNA, complified by Ecg. and englishesered for inclusion in the immunotoxin construct (085386).

PP Language Linked to dimeric proteins - with immunoglobulin pri tangents linked to dimeric protein, for diagnostic or tangents linked to dimeric protein, for diagnostic or transperts linked to dimeric protein.

Pr Language Linked to dimeric protein.

Pr Language Linked to dimeric protein and language linked from the anti-snake small conclude the protein and the protein and language linked from the anti-snake small conclude the protein and the protein smooth language linked from the same sure using children to the same vertex in the Hohaln fragment was inserted concluded in the same sure using primers (98041 and 98042. The two amplified fragments was inserted concluded the respective and the respective linked in the same sure using poles for a sequence, a signal peptide and the first is codons of photon for cassette was positioned between the tirst is codons of photon. The cassette was positioned between the first is codons of photon for the transcription termination sequence of photon. The fusion codonstruct is expected to to encode a hybrid protein companies to district a bar-derived units. The invention also covers hybrid continued proteins containing two districts hab-derived units. The invention also covers hybrid continued proteins containing two different hab-derived units. The produce of the photon, the hybrid molecules can be used as cell-targetting containing the sequence (80 MB): 231 A; 241 C; 194 G; 216 T;

Mon

co by Muly reverse transcriptage, The primers used for cDNA synthesis of the C waps complementary to the 5 and of the CNA synthesis of the C waps domain. Some of the primers used for cDNA synthesis are called the C waps domain. Some of the primers used for cDNA synthesis are converted to the SNA synthesis of the C warrable region of a particular antibody polypeptide was also used for CDNA synthesis are converted to the synthesis of the the synthesi

Monoclonal anti-idiotypic antibodies mimicking epidermal growth factor receptor useful for tumour therapy (1416). The receptor useful for tumour therapy (1416). The receptor (1586) app. English: antibodies, 1588, 386 and 586 are new. They induce an immune response against epidermal growth factor receptor (1587). The sequences of the heavy and light chain variable regions of these antibodies are given in the specification. The antibodies are used for the manufacture of drugs directed against tumours that express BGFR on their surface, including melanomas, glamms and carcinomas, glamms and carcinomas, glamms and carcinomas, also make the special sequence (1588). 109 N; 104 C; 100 G; 116 T;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Murine monoclonal anti-idiotypic antibodies, 1588, 386 and 586 are new. They induce an immune response against epidermal growth factor receptor (SCFR): The sequences of the heavy and light chain warlable regions of these antibodies are given in the specification. The antibodies are used for the manufacture of drugs directed against unbours that express SCFR on their surface, including melanomas, globmas and carcinomas.

Sequence 441 BP: 111 A; 110 C; 104 G; 116 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       381 tgganatnamacgggttgatcctgcaccaactgtatccatcttcccaccaatcca 436

A cDNA insert (70378) in vector penishent region of anti-rabbit

chain variable region and part of the constant region of anti-rabbit

interleution of count deart of the constant region of anti-rabbit

by amplification of cDNA derived iron 64: 2 5 producing hybridosa cells

using primers (70371; 74) based on light chain sequences. It is

used with cDNA (70379; ooding for the heavy chain variable region

in the produced anti-IL-8 mouse-human chineric Pab.

Pr and/or heavy chain equences; used to prevent interleukin-8 mediated Pr neutrophil observate. Programme of the process of the constant region of the nurine monoclonal antibody 561.25. This cDNA constant region of the nurine monoclonal antibody 561.25. This used in the vector primarb to constant programme of a chimeric 664.25. Fab weator by various recombinant creimiques. This chimeric 664.25. Fab weator by various recombinant constant region of a chimeric fab complementarity determining the chimeric fab complementarity determining the constant region of a light chain and/or a heavy chain variable region from the new constant programme obtained the constant region of the new constant programme obtained the constant region of the human immunociphila programme obtained the constant region of the human immunociphila from the constant which is used to be treat the collisis and bacterial paramonia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

The antibody is only weakly inhibitory on the own. When anti-II/2 alpha antibodies which are atrongly inhibitory on that own are used with anti-Ord antibodies which are which are on the from are used with anti-Ord antibodies which are also strongly inhibitory, thair immunosuppressive properties are approper; they sprengiatically inhibit T-selper cell proliferation at Down thouse synficantly reducing the general limine response. Who such synergiatic effect is observed with the weakly inhibitory See 036607-036615.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              19 13:23:49

MUSICIAPA 618 bp mRNA. ROD 09-JUL-1996
DEFINITION Hopes aRNA for immunoglobulin light chain, partial sequence.
ACCESSION 947956
EXPRORES 1947956
SOURCE MALE MANUAGE 1945 Chain
ORGANISH Has musculus (sub_species:domesticus, strain:BALB/c) CDNA to mRNA.
DRAMPORES Has musculus (sub_species:domesticus, strain:BALB/c) CDNA to mRNA.
EXPRORES Has musculus (sub_species:domesticus, strain:BALB/c) CDNA to mRNA.
Verrebreaks Mammalis: Eutheria: Rodentia: Sciurognathi: Muridae;
